

## Meeting Notes 12/04

- What should we focus on?
  - What do you feel is most important?
    - Focus on Badges: Define a threshold for the number of badges a business has been given. Give them a tiered status
    - Keep the matching numbers on the business feed side => map
      - Could use the same symbol on the map
      - Show type of business on map with different symbols, use coloring based on tier system of badges.
    - Info window popup: redundant to have badges here?
      - Should we do overall rating and other info in window view?
    - Sorting by most important badges to users?
      - Could be an additional feature on sign up, using the same add/subtract mechanic as businesses
      - Could also be searching through the list dynamically on the home page.
        - Could be an issue: filtering vs. sorting
      - Use radiix/counting/tuple (not sure which) sort to sort business feed, but don't filter.
    - Sorting by badges, not doing user auth/incentivizing user reviews
      - "Don't worry about project plan in the sense that things are changing, focus on those changes"
    - Video is shown, 30 sec - 1 min breakdown about strengths of project by Dylan
    - We are allowed to share code/github repo with others, might have to ask to make it public.
