

Meeting Agenda 12/03

- achieved & missed milestones from your project plan
 - All MVP milestones were met
- any difficulties that you encountered;
 - None?
- any changes made to your design or project plan.
 - Pivoting towards more authentication-related tasks in the final product
 - Business creation
 - User reviews
 - How to do this cleanly without having to introduce large security features?
 - Also want to consider incentivization of user profiles
 - Looking @ other projects made us want to add more user friendly features such as favoriting, search bar, preset badge filtering options, etc.

General Questions

- Is there any way we can flesh out the badge concept more to stand out?
 - Tiered system (bronze, silver, gold badges) in final product to indicate business success based on users affirming / denying badges
- How should we sort the main business feed content? We are considering:
 - Business success → best review average + affirm / deny ratio
 - Allow users to prioritize badges (in a ranked order)
 - By distance to the user (if we can get current location services working)
- Authentication (how)
 - Business authentication ?
 - Review authentication (QR codes?)
- Things we are considering for Final Product:
 - Allowing users to like reviews
 - Search bar for searching businesses by name
 - Hovering over business in BusinessFeed opens info window on Map
 - InfoWindows as Vue components (to use <router-link> instead of <a>)
